

NO DUST is a liquid dust control agent. It is a non-hazardous substance that when applied to unpaved roads, holds and maintains road dust in a dampened state over long periods of time. NO DUST absorbs moisture from the air and even resists evaporation even in what would be considered low humidity environments, to keep the dust under control. It is NO DUST's ability to regulate moisture on road surfaces that is the key to building roads that last.

Application:

- Sochem can provide application services.
- Sochem also provides technical assistance if needed.
